

Little Pond. — Little Pond, situated to the east of Falmouth Heights, is connected with the ocean by a boarded outlet through which the fish pass into the pond.

Wing's Pond. — A small stream rises in Wing's Pond, or Herring Pond, at North Falmouth, and flows about 1 mile to Buzzard's Bay. The catching place, situated halfway down the stream, consists of a board passageway 1 foot wide. The fishery, of little value, is public, and a few alewives are taken by local residents.

RED BROOK (CATAUMET).

Red Brook has its source in a swamp in Cataumet, and its outlet in Red Brook Harbor. Its upper waters are used for flooding cranberry bogs, and it has one dam, equipped with a new concrete fishway, up which alewives experience little difficulty in passing. The fishery was established in 1900 by the town of Bourne, and the privilege has sold for from \$6 to \$41. The average annual catch from 1909 to 1911 ranged from 50 to 60 barrels. Though possessing limited spawning grounds, with proper care this fishery may be made even more productive than it is at present.

MONUMENT RIVER.

Monument River, or Herring River, Bourne, has been absorbed by the Cape Cod Canal. The stream, which has its origin in Little and Great Herring ponds, now is accessible to alewives from both Buzzard's Bay and Cape Cod Bay.

Between Little Herring and Great Herring ponds, beautiful and attractive spawning grounds, the stream passes through a region of cranberry bogs and over a concrete dam with a small fishway. Just below Great Herring Pond is situated the catching house. At Bournedale are two small artificial ponds. The sluiceway of the lower dam is now open and the pond drained, while the upper is provided with a fishway. At the outlet of the stream into the canal is a cement fishway, but the incline is so steep and the whirl of water so great that the alewives, except at high tide, find difficulty in ascending. In places the steep slope of the stream makes difficult the ascent,
