## **LABORATORY REPORT**

Project: **Buzzards Bay/3871-002**  
Lab ID: **87247**  
Received: **08-30-05**

Dear Kevin:

Enclosed are the analytical results for the above referenced project. The project was processed for Standard turnaround.

This letter authorizes the release of the analytical results, and should be considered a part of this report. This report contains a sample receipt report detailing the samples received, a project narrative indicating project changes and non-conformances, a quality control report, and a statement of our state certifications.

The analytical results contained in this report meet all applicable NELAC standards, except as may be specifically noted, or described in the project narrative. This report may only be used or reproduced in its entirety.

I attest under the pains and penalties of perjury that, based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Should you have any questions concerning this report, please do not hesitate to contact me.

Sincerely,

Eric H. Jensen  
Operations Manager

## Data Certification

Project: Buzzards Bay/3871-002  
Client: GeoInsight, Inc.

Lab ID: 87247  
Received: 08-30-05 20:21

MA DEP Compendium of Analytical Methods						
Project Location:		n/a		MA DEP RTN:		n/a
This Form provides certifications for the following data set:						
MA DEP EPH:		87247-01,-02				
Sample Matrices:		Groundwater ( )	Soil/Sediment (X)	Drinking Water ( )	Other ( )	
MCP SW-846	8260B ( )	8151A ( )	8330 ( )	6010B ( )	7470A/1A ( )	
Methods Used	8270C ( )	8081A ( )	VPH ( )	6020 ( )	9012A <sup>2</sup> ( )	
As specified in MA DEP Compendium of Analytical Methods:	8082 ( )	8021B ( )	EPH (X)	7000 S <sup>3</sup> ( )	Other ( )	
(check all that apply)						
1. List Release Tracking Number (RTN), if known.						
2. SW-846 Method 9012A (Equivalent to 9014) or MA DEP Physiologically Available Cyanide (PAC) Method						
3. S - SW-846 Methods 7000 Series. List individual method and analyte.						
An affirmative response to questions A, B, C and D is required for "Presumptive Certainty" status.						
A.	Were all samples received by the laboratory in a condition consistent with that described on the Chain-of-Custody documentation for the data set?					Yes
B.	Were all QA/QC procedures required for the specified analytical method(s) included in this report followed, including the requirement to note and discuss in a narrative QC data that did not meet appropriate performance standards or guidelines?					Yes
C.	Does the analytical data included in this report meet all the requirements for "Presumptive Certainty," as described in Section 2.0 of the MA DEP document CAM VII A, <i>Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data</i> ?					Yes
D.	<u>VPH and EPH methods only:</u> Was the VPH or EPH method run without significant modifications, as specified in Section 11.3?					Yes
A response to questions E and F below is required for "Presumptive Certainty" status.						
E.	Were all QC performance standards and recommendations for the specified methods achieved?					Yes
F.	Were results for all analyte-list compounds/elements for the specified method(s) reported?					Yes
All No answers are addressed in the attached Project Narrative.						
I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

## Massachusetts DEP EPH Method Extractable Petroleum Hydrocarbons by GC/FID

Field ID: W2A02-82905-01  
Project: Buzzards Bay/3871-002  
Client: Geolnsight, Inc.

Matrix: Soil  
Container: 120 mL Amber Glass  
Preservation: Cool

Laboratory ID: 87247-01  
Sampled: 08-29-05 11:30  
Received: 08-30-05 20:21  
Extracted: 09-12-05 14:00  
Analyzed (AL): 09-22-05 05:08  
Analyzed (AR): 09-22-05 05:52  
Analyst: MM

QC Batch ID: EP-2142-M  
Instrument ID: GC-9 Agilent 6890  
Sample Weight: 15 g  
Final Volume: 1 mL  
% Solids: 88  
Aliphatic Dilution Factor: 1  
Aromatic Dilution Factor: 1

EPH Ranges	Concentration	Notes	Units	Reporting Limit
n-C9 to n-C18 Aliphatic Hydrocarbons <sup>†</sup>	BRL		mg/Kg	33
n-C19 to n-C36 Aliphatic Hydrocarbons <sup>†</sup>	BRL		mg/Kg	33
n-C11 to n-C22 Aromatic Hydrocarbons <sup>†</sup> ◊	BRL		mg/Kg	33

Unadjusted n-C11 to n-C22 Aromatic Hydrocarbons <sup>†</sup>	BRL		mg/Kg	33
--	-----	--	-------	----

QC Surrogate Compound	Spiked	Measured	Recovery	QC Limits
Fractionation: 2-Fluorobiphenyl	2.9	2.2	76 %	40 - 140 %
2-Bromonaphthalene	2.9	2.3	79 %	40 - 140 %
Extraction: Chloro-octadecane	2.9	2.1	72 %	40 - 140 %
ortho -Terphenyl	2.9	2.2	74 %	40 - 140 %

QA/QC Certification	
1. Were all QA/QC procedures required by the method followed?	Yes
2. Were all performance/acceptance standards for the required QA/QC procedures achieved?	Yes
3. Were any significant modifications made to the method, as specified in Section 11.3.1.1?	No
Method non-conformances indicated above are detailed below on this data report, or in the accompanying project narrative and project quality control report. Release of this data is authorized by the accompanying signed project cover letter. The accompanying cover letter, project narrative and quality control report are considered part of this data report.	

**Method Reference:** Method for the Determination of Extractable Petroleum Hydrocarbons, MA DEP (Revision 1.1, 2004).  
Sample extraction performed by microwave accelerated solvent extraction technique. Results are reported on a dry weight basis.

**Report Notations:** BRL Indicates concentration, if any, is below reporting limit for analyte. Reporting limit is the lowest concentration that can be reliably quantified under routine laboratory operating conditions. Reporting limits are adjusted for sample size and dilution.  
<sup>†</sup> Hydrocarbon range data excludes concentrations of any surrogate(s) and/or internal standards eluting in that range.  
◊ n-C11 to n-C22 Aromatic Hydrocarbons range data excludes the method target analyte concentrations.

**A. Documentation and Client Communication**

The following documentation discrepancies, and client changes or amendments were noted for this project:

1. Samples identified as 'W2A2-82905-01' and 'W2A2-82905-02' were taken off hold and analyzed by MA DEP EPH, per Kevin Trainer, 09-08-05.

**B. Method Modifications, Non-Conformances and Observations**

The sample(s) in this project were analyzed by the references analytical method(s), and no method modifications, non-conformances or analytical issues were noted, except as indicated below:

1. MA DEP EPH Note: Samples 87247-01,-02. Polynuclear aromatic hydrocarbon (PAH) target analytes were identified and quantified by GC/MS-SIM, in accordance with the method provision for alternate determinative methodologies. GC/MS-SIM was used to achieve low quantification limits necessary for regulatory compliance. Target analytes were determined utilizing the same sample extract used for carbon range determination by GC/FID.

## Quality Assurance/Quality Control

### A. Program Overview

Groundwater Analytical conducts an active Quality Assurance program to ensure the production of high quality, valid data. This program closely follows the guidance provided by *Interim Guidelines and Specifications for Preparing Quality Assurance Project Plans*, US EPA QAMS-005/80 (1980), and *Test Methods for Evaluating Solid Waste*, US EPA, SW-846, Update III (1996).

Quality Control protocols include written Standard Operating Procedures (SOPs) developed for each analytical method. SOPs are derived from US EPA methodologies and other established references. Standards are prepared from commercially obtained reference materials of certified purity, and documented for traceability.

Quality Assessment protocols for most organic analyses include a minimum of one laboratory control sample, one method blank, one matrix spike sample, and one sample duplicate for each sample preparation batch. All samples, standards, blanks, laboratory control samples, matrix spikes and sample duplicates are spiked with internal standards and surrogate compounds. All instrument sequences begin with an initial calibration verification standard and a blank; and excepting GC/MS sequences, all sequences close with a continuing calibration standard. GC/MS systems are tuned to appropriate ion abundance criteria daily, or for each 12 hour operating period, whichever is more frequent.

Quality Assessment protocols for most inorganic analyses include a minimum of one laboratory control sample, one method blank, one matrix spike sample, and one sample duplicate for each sample preparation batch. Standard curves are derived from one reagent blank and four concentration levels. Curve validity is verified by standard recoveries within plus or minus ten percent of the curve.

### B. Definitions

**Batches** are used as the basic unit for Quality Assessment. A Batch is defined as twenty or fewer samples of the same matrix which are prepared together for the same analysis, using the same lots of reagents and the same techniques or manipulations, all within the same continuum of time, up to but not exceeding 24 hours.

**Laboratory Control Samples** are used to assess the accuracy of the analytical method. A Laboratory Control Sample consists of reagent water or sodium sulfate spiked with a group of target analytes representative of the method analytes. Accuracy is defined as the degree of agreement of the measured value with the true or expected value. Percent Recoveries for the Laboratory Control Samples are calculated to assess accuracy.

**Method Blanks** are used to assess the level of contamination present in the analytical system. Method Blanks consist of reagent water or an aliquot of sodium sulfate. Method Blanks are taken through all the appropriate steps of an analytical method. Sample data reported is not corrected for blank contamination.

**Surrogate Compounds** are used to assess the effectiveness of an analytical method in dealing with each sample matrix. Surrogate Compounds are organic compounds which are similar to the target analytes of interest in chemical behavior, but which are not normally found in environmental samples. Percent Recoveries are calculated for each Surrogate Compound.

EPH Ranges	Concentration	Notes	Units	Reporting Limit
n-C9 to n-C18 Aliphatic Hydrocarbons <sup>†</sup>	BRL		mg/Kg	30
n-C19 to n-C36 Aliphatic Hydrocarbons <sup>†</sup>	BRL		mg/Kg	30
n-C11 to n-C22 Aromatic Hydrocarbons <sup>†</sup> <sup>◊</sup>	BRL		mg/Kg	30
Unadjusted n-C11 to n-C22 Aromatic Hydrocarbons <sup>†</sup>	BRL		mg/Kg	30

QC Surrogate Compound	Spiked	Measured	Recovery	QC Limits
Fractionation: 2-Fluorobiphenyl	2.7	1.9	72 %	40 - 140 %
2-Bromonaphthalene	2.7	2.0	74 %	40 - 140 %
Extraction: Chloro-octadecane	2.7	1.9	73 %	40 - 140 %
ortho -Terphenyl	2.7	2.0	76 %	40 - 140 %

**Method Reference:** Method for the Determination of Extractable Petroleum Hydrocarbons, MA DEP (Revision 1.1, 2004).  
Sample extraction performed by microwave accelerated solvent extraction technique.

**Report Notations:** BRL Indicates concentration, if any, is below reporting limit for analyte. Reporting limit is the lowest concentration that can be reliably quantified under routine laboratory operating conditions. Reporting limits are adjusted for sample size and dilution.  
<sup>†</sup> Hydrocarbon range data excludes concentrations of any surrogate(s) and/or internal standards eluting in that range.  
<sup>◊</sup> n-C11 to n-C22 Aromatic Hydrocarbons range data excludes the method target analyte concentrations.

**Method Reference:** Test Methods for Evaluating Solid Waste, US EPA, SW-846, Third Edition, Update III (1996).  
Method modified by use of selected ion monitoring (SIM) in accordance with Section 7.5.5 of the method.  
Method protocol modified to include acidification and the surrogate compound in accordance with the MA DEP Method for the Determination of Extractable Petroleum Hydrocarbons.  
Sample extraction performed by EPA Method 3510C.

**Report Notations:** All calculations performed prior to rounding. Quality Control Limits are defined by the methodology, or alternatively based upon the historical average recovery plus or minus three standard deviation units.  
The LCS and LCSD are prepared from separate source standards than those used for calibration.
